

**FEDIOL Guidance Note on handling of oilseeds containing
Ambrosia seeds**

"Any transport carrier of oilseeds ready to discharge at the discharge point near to the crush plant (as covered by the existing HACCP plan) containing Ambrosia seeds can be safely discharged and crushed (while respecting the existing HACCP plan) without any risk of spreading into the environment. Any cleanings or hulls resulting from such oilseeds containing Ambrosia seeds shall not be added to the meals without having passed the extraction step (killing the germination capacity)."
