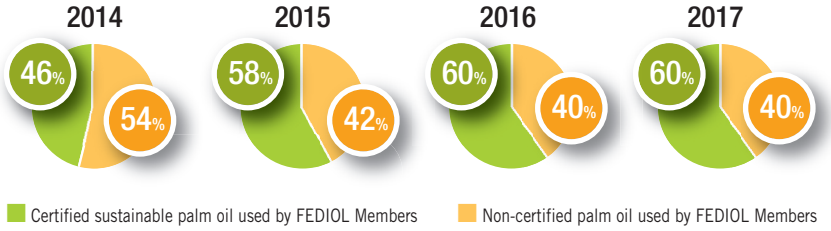
2017
Palm oil monitoring

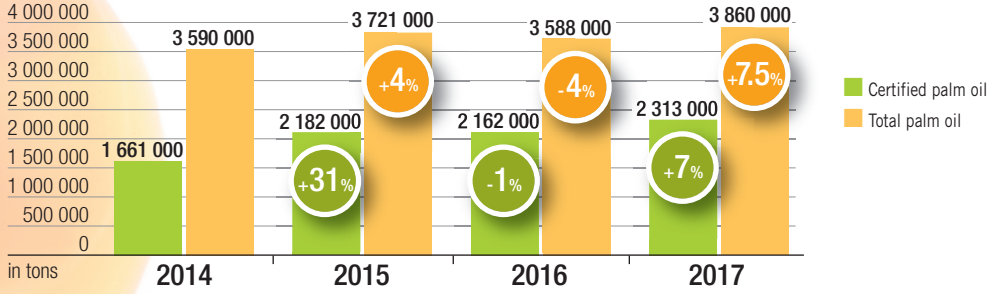
The FEDIOL survey covers intake volumes of crude palm oil and fractions entering the EU refineries of FEDIOL companies participating in the survey.

Certified sustainable palm oil intake by FEDIOL reporting companies increased from 46% to 60%



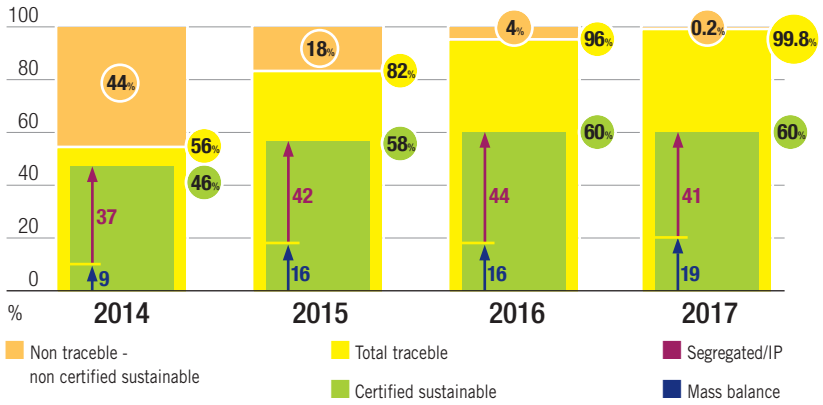
The percentage of certified sustainable palm oil has stabilized at 60% at the end of 2017

The total palm oil refined by FEDIOL members in 2017 amounted to 3.9 million tons, an increase of 7% from 3.6 million tons in 2016 and total certified sustainable palm oil volumes increased in the same extent



FEDIOL initiated in parallel a data collection on traceable palm oil. It provides a tool to trace back the palm oil to the mill and in certain cases beyond to the plantation or the farmer. The non-certified sustainable but traceable volumes are a means to initiate a transition to more sustainability. In 2017, 99.8% of the total intake volumes of FEDIOL companies participating in the survey were traceable (including the 60% certified sustainable), leaving virtually no oil which was neither certified sustainable nor traceable.

Percentage of intake volumes: Palm Oil



Whereas volumes traded under mass balance slightly increased at 19% of the total intake volume, palm oil traded as segregated/IP reached 41% of the total intake volume.

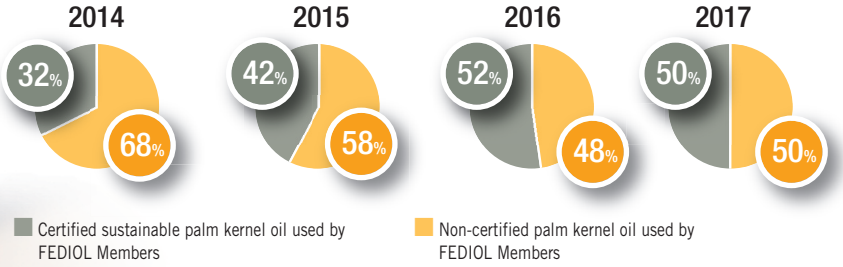
2017
Palm kernel oil monitoring

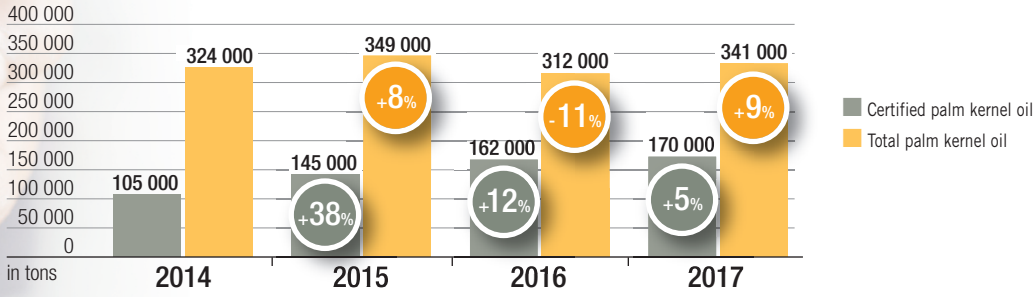
The FEDIOL survey covers intake volumes of crude palm kernel oil and fractions entering the EU refineries of FEDIOL companies participating in the survey.

Certified sustainable palm kernel oil intake by FEDIOL reporting companies increases from 32% to 50%



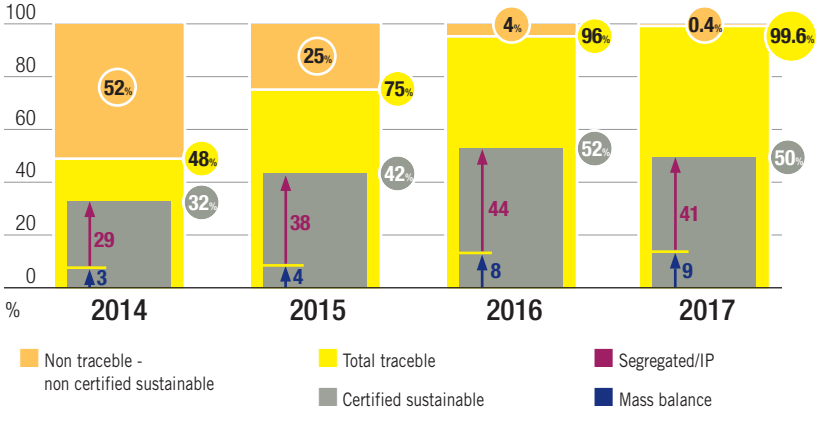
The growth in certified sustainable palm kernel oil percentage has been slightly reversed in 2017 to reach 50% from a much lower level of 42% in 2015.

The total volume of palm kernel oil refined by FEDIOL members in 2017 slightly increased from 312.000 tons in 2016 to 341.000 tons in 2017 (+9%) whereas the certified sustainable palm kernel oil volumes continued increasing, but to a lesser extent (+5%)



Similar to the trend in palm oil, the non-certified but traceable volumes reached 99.6% of the total intake of FEDIOL companies participating in the survey in 2017 (including the 50% which is certified sustainable), leaving virtually no oil which is neither certified sustainable nor traceable.

Percentage of intake volumes: Palm Kernel Oil



In 2017, most of this certified sustainable palm kernel oil, *i.e.* 41% of the total intake volume, was traded under segregated/IP chain of custody and the rest, 9% of the total intake volume, under the mass balance regime.
